Free will, indeterminacy, and self-determination

By Moritz Deutschmann

GRIN Verlag Mai 2009, 2009. Taschenbuch. Book Condition: Neu. 210x148x2 mm. This item is printed on demand - Print on Demand Neuware - Seminar paper from the year 2007 in the subject Philosophy - Theoretical (Realisation, Science, Logic, Language), grade: A- (=1,25), University of California, Berkeley (Department of Philosophy), course: Collective Intentionality (John Searle), 18 entries in the bibliography, language: English, abstract: Free will is one of the most fundamental presuppositions that we make in our everyday lives. At the same time, free will belongs to the concepts that are most difficult to integrate into a scientific idea of how the world works. This contrast has haunted philosophers for centuries, and although it seems that almost everything has already been said about this topic, there has been an animated debate in recent decades. In this paper, I would like to consider two of the positions adopted in this debate. At first, I would like to explore John Searle's interpretation of free will as a sequence of several moments of indeterminacy ('gaps') between the reasons for our actions and the actions themselves. I think the best way to understand his conception is to see it as an attempt to unite two...
