Excerpt: . has to pull down the bucket to make it descend into the well; the counterbalance assisting him in hoisting up the bucket when full; and thus, by apportioning his efforts, he doubles his effective force at the time he needs it. The application of the pole as a lever for moving weights, or for turning over the trunk of a tree, might suggest its further use, combined with a rope, to obtain mechanical power; the author has seen old seamen, in case of need, resort to such a contrivance, and make, as they termed it, a purchase, with a plain wooden roller (part indeed of a firtree trunk), a rope, and two handspikes, and, by the skilful combination of these materials over a hatchway, accomplish what the united strength of all hands failed to effect without such assistance. A little in advance of this, is the mode of hoisting timber common throughout all the North of Europe, and sometimes used by our woodmen in England, by means of the lever and axle attached to the three legs or triangle --a tripod, formed of three poles, secured by a rope or shackle at the top. The end of one handspike or spoke, being occasionally thrust through the axle or windlass, rests upon the ground and stops it from unwinding, forming a simple but effectual check. This same primitive windlass is still used by the Chinese for weighing anchor, even in their largest junks. A...
